[Technology Innovation Showcase](#) | [Technology Fall Conference](#) | **October 28, 2011**

**Showcase Title**

Developing Affordable Multi-Touch Displays for Use in Education

**Authors/Innovators**

Mark Potter

**Showcase/Innovative Practice Description**

The central piece of this showcase is a large-scale multi-touch tabletop display. This display was built with the purpose of working on modernizing the technology within education in an affordable way. Many multi-touch screens are prohibitively expensive for many educational institutions with some 27-inch displays starting at \$12,000 and some 82-inch displays starting at \$120,000. This project was meant to build a 60-inch display for under \$4,000 with comparable functionality. Though functionality is still under development, there are a number of educational applications to the display, which will allow it to be integrated into the classroom.
